

Certification; Challenges for MNCs

ENISA Presentation

Introduction

Ericsson

- ~95,000 Employees
- Operating in 180 Countries
- Four main business areas
 - Networks
 - Technology and Emerging Business
 - Services
 - Digital Services

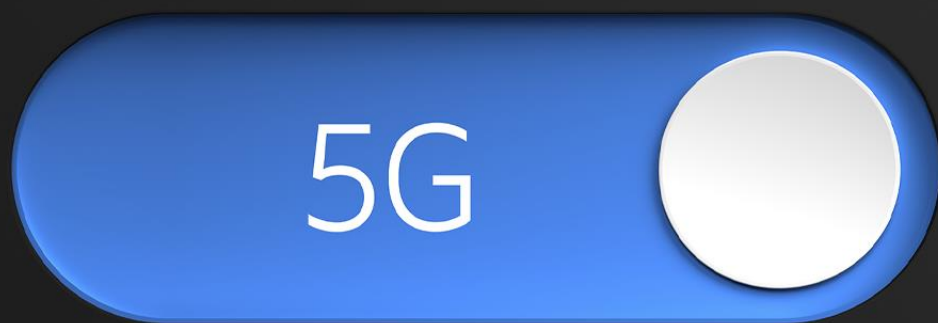

Brian O'Toole

- Joined Ericsson in 2005
- Contributor through SIS for ISO 27001, 27009
- Editor for ISO 27011/ITU-T X.1053

Product certification must consider the underlying business to be relevant. Current management systems certification schemes may not fit modern organisations.

The 5G switch made easy.

For Product certification, all elements of the trust stack must be considered.

Trusted business

Trusted operations

Trusted deployment

Trusted HW & SW

Certification challenges faced by Ericsson

- Country by Country based certification is not relevant or feasible, but Customers demand country based coverage
- The waterfall model for product development or delivery is over. Processes are executed in parallel.
- Focus on “Physical Sites” as part of a management system is not relevant for 75% of Ericsson’s sites.
- Business is non-homogenous; Product development is organised by Business Area, not by Geography.
