

ENISA Work on Threat Landscape

L. Marinos, ENISA

www.enisa.europa.eu

The exposure of an assets to threats

Threat Information vs. Intel.

Information versus Intelligence

| Information | Intelligence |
|--|--|
| - Raw, unfiltered feed | - Processed, sorted information |
| - Unevaluated when delivered | - Evaluated and interpreted by trained Intelligence Analysts |
| - Aggregated from virtually every source | - Aggregated from reliable sources and cross correlated for accuracy |
| May be true, false, misleading, incomplete, relevant or irrelevant Not actionable | Accurate, timely, complete (as possible), assessed for relevancy Actionable |

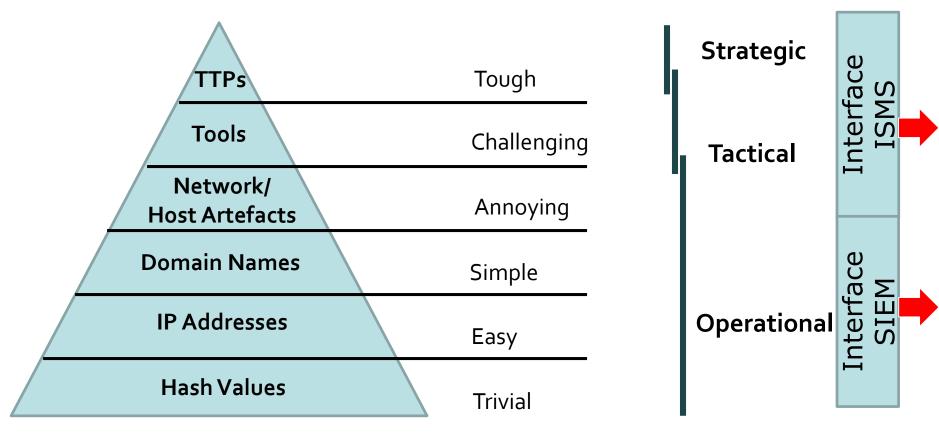

- Strategic (S): the highest level information about threats.
 - Created by humans, consumed by humans
 - Lifespan months
- Tactical (T): at this level, stakeholders obtain aggregated information about threats and their elements.
 - Created and consumed by humans and machines
 - Lifespan weeks, months
- **Operational (O):** technical information about threats, incidents, etc.
 - Created by machines, consumed by machines/humans
 - Lifespan days, weeks

The Pyramid of Pain

Types of information

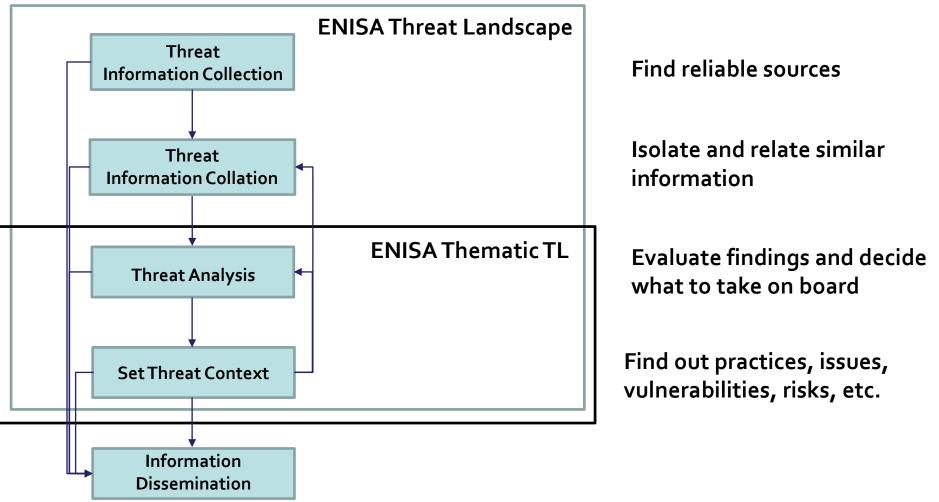

http://detect-respond.blogspot.gr/2013/03/the-pyramid-of-pain.html

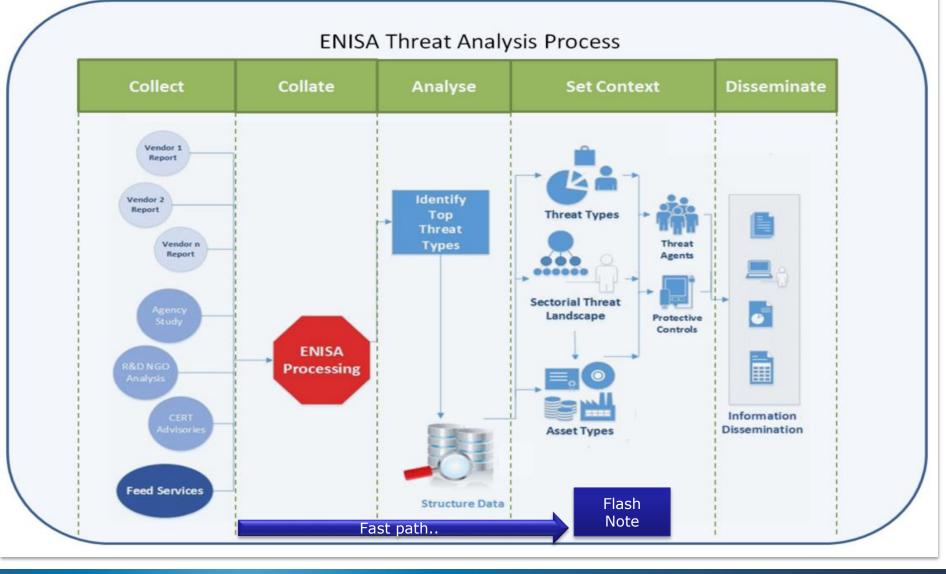

From Threat Info to Intel...

How does ENISA do it?

What are the parts?

- Threats
- Threat Agents
- Attack methods (vectors)
- Assets
- (Mostly technical) Vulnerabilities
- Controls

...and interconnections thereof

Our internal Cyber Threat Intelligence!

CAUTION: TI IS NOT REPLACEMENT OF RISK MANAGEMENT

Top Threats and Trends

| Top Threats 2013 | Assessed Trends 2013 | Top Threats 2014 | Assessed Trends 2014 | Change in ranking |
|---|-------------------------|--|-------------------------|----------------------|
| Drive-by downloads (renamed to Web-based attacks) | 0 | Malicious code: Worms/Trojans | 0 | ↑ |
| 2. Worms/Trojans | 0 | 2. Web-based attacks | 0 | \checkmark |
| 3. Code Injection | 0 | Web application /Injection attacks | 0 | \rightarrow |
| 4. Exploit Kits | 0 | 4. Botnets | U | 1 |
| 5. Botnets | • | 5. Denial of service | 0 | 1 |
| Physical Damage/Theft/Loss | 0 | 6. Spam | U | 1 |
| 7. Identify Theft/Fraud | 0 | 7. Phishing | 0 | 1 |
| 8. Denial of Service | 0 | 8. Exploit kits | 0 | \checkmark |
| 9. Phishing | 0 | 9. Data breaches | 0 | 1 |
| 10. Spam | ٢ | 10. Physical damage/theft /loss | 0 | \checkmark |
| 11.Rogueware/Ransomware / Scareware | 0 | 11. Insider threat | 0 | (NA. new threat) |
| 12. Data Breaches | 0 | 12. Information leakage | 0 | Ϋ́ |

Web is the most popular platform for malware distribution: *"Malicious URL is by far the first malicious object detected (72,9%)"* Ref: (Kaspersky IT Threat Evolution Q2 2014, findings overview: <u>http://securelist.com/analysis/quarterly-malware-reports/65340/it-threat-evolution-q2-2014/</u>)

Mail is another important channel for malware distribution: "Of the e-mail traffic, 13.7% contained malicious URL" Ref: Symantec Intelligence Report May 2014, <u>http://www.symantec.com/connect/blogs/symantec-intelligence-report-may-2014</u>

Attacks become more effective and targeted: "Mobile banking Trojans have increased by almost factor four over the year. Since July 2012 14,5 Times" Ref: (Kaspersky IT Threat Evolution Q2 2014, findings overview: <u>http://securelist.com/analysis/quarterly-malware-reports/65340/it-threat-evolution-q2-2014/</u>)

2014 the year of data breach? *"57% of the significant data loss over the past decade resulted from what could be termed sloppiness"* Ref: <u>http://capgemini.ft.com/web-review/sloppiness-to-blame-for-more-data-losses-than-hacking-study-claims_a-41-648.html</u>, relevant report <u>http://cmds.ceu.hu/sites/cmcs.ceu.hu/files/attachment/article/663/databreachesineurope.pdf</u>

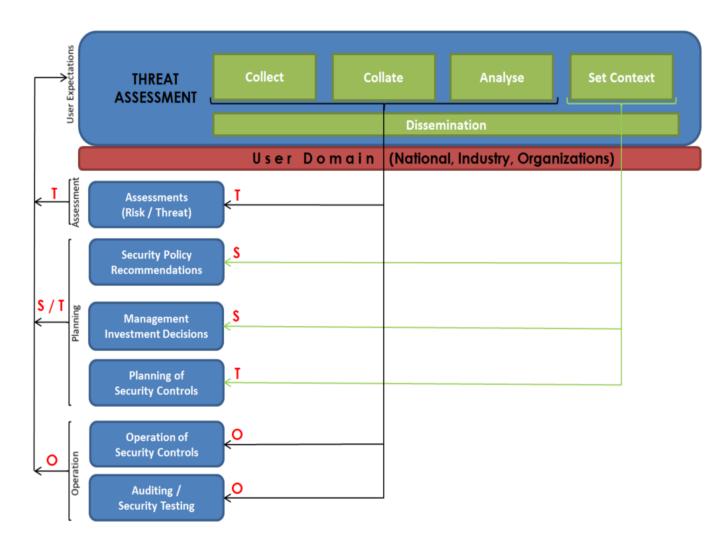

Efficiency of existing controls needs to be increased: *"54% of malware goes undetected by Antivirus products"* Ref: NTT Global Threat Intelligence Report 2014 (<u>http://www.nttcomsecurity.com/en/services/managed-security-services/threatintelligence/</u>)

Sophistication of malware and attacks increases: *"In 2013, 30% of malware samples used custom encryption to steal data.",* Ref: WebSence Threat Report 2014, <u>http://www.websense.com/content/websense-2014-threat-report.aspx</u>

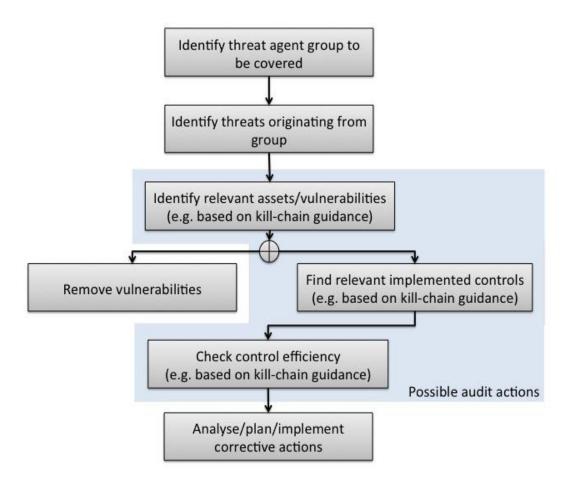

What to do with Threat Intel

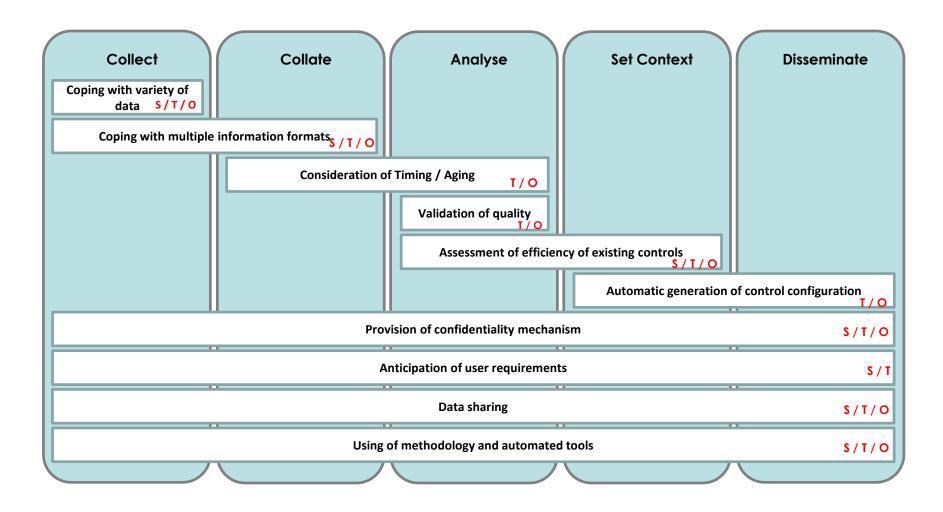

A typical use-case

ENISA threat landscape and thematic landscapes 2015

- Increase the maturity of collection and analysis
- Streamline Stakeholder Group
- Mobilize/liaise with other stakeholders
- Event organisation
- Threat Landscape Big Data
- Threat Landscape Software Defined Networks

- Understand the scope of your assessments
- Identify threat exposure and understand what you can afford
- Build TI tool usage models according to points above
- Increase agility of assessments and ISMS
- Think that current state of TI is still initial BUT has a great potential

- Knowledge can be obtained by aggregating and correlating information
- Knowledge acquisition needs brain power
- Skill is an amount of knowledge on a certain subject matter
- A lot of skill is needed in the area of cyber threat intelligence
- ENISA can contribute to it by offering threat knowledge to stakeholders

Thank you for your attention....
