Features

What makes PET maturity assessment repository unique:

- Repository
- Application
- Community

#1 By design means ‘think privacy’

- Engineering privacy and data protection into data processing operations.
- Not only technical – procedures, processes, people: a strategic change.
- Practical implementation: quick wins and big challenges.

Think privacy – Design privacy

#2 Designing needs a plan

	PRIVACY BY DESIGN STRATEGY	DESCRIPTION
1	Minimize	The amount of personal data should be restricted to the minimal amount possible (data minimization).
2	Hide	Personal data and their interrelations should be hidden from plain view.
3	Separate	Personal data should be processed in a distributed fashion, in separate compartments whenever possible.
4	Aggregate	Personal data should be processed at the highest level of aggregation and with the least possible detail in which it is (still) useful.
5	Inform	Data subjects should be adequately informed whenever personal data is processed (transparency).
6	Control	Data subjects should be provided agency over the processing of their personal data.
7	Enforce	A privacy policy compatible with legal requirements should be in place and should be enforced.
8	Demonstrate	Data controller must be able to demonstrate compliance with privacy policy into force and any applicable legal requirements.

#3 Choosing appropriate measures

- Measures appropriate to the risk.
- Data minimization: a strong starting point.
- Which tool should I use?
 - Defining the state-of-the-art.
 - Companies not always in position to control design of systems/tools.

Need for guidance and examples!

“

Design is not just what it looks like and feels like. Design is how it works.

Steve Jobs
