Compliance confirmed by TUV IT

Adoption of Qualified Certificates for Signing

Digital B2G Enablement for Chinese companies
(e.g. Public Procurement)

Known issues with common understanding of QTS Audits

How to interprete unequal MS national rules?

What's the impact of local legislation?

eIDAS, Art. 24

(d) by using other identification methods recognised at national level which provide equivalent assurance in terms of reliability to physical presence. The equivalent assurance shall be confirmed by a conformity assessment body.
Known issues with common understanding of QTS Audits

What are the incident reporting practices?

How does it impact for TSP/CAB rating?

EN 319 412-1

1) "PAS" for identification based on passport number.

2) "IDC" for identification based on national identity card number.

3) "PNO" for identification based on (national) personal number (national civic registration number).

4) "TAX" for identification based on a personal tax reference number issued by a national tax authority. This value is **deprecated.** The value "TIN" should be used instead.

5) "TIN" Tax Identification Number according to the European Commission – Tax and Customs Union (https://ec.europa.eu/taxation_customs/tin/tinByCountry.html). Or

6) Two characters according to local definition within the specified country and name registration authority, identifying a national scheme that is considered appropriate for national and European level, followed by the character ":" (colon).

Other initial character sequences are reserved for future amendments of the present document.

EXAMPLES: "PASSK-P3000180", "IDCBE-590082394654" and "EI:SE-200007292386".

# Known issues with common understanding of QTS Audits

How to compare different CARs/TSPs (automatically)?

How long is a point-in-time audit good for?

Thank you.
